January 2022

Factsheet

Manulife Shariah Global REIT Fund

Market review

The global equity markets posted healthy returns in December, lifting most major indexes near all-time highs by year-end. Timing played a key role in the rally, as the final week of November brought a meaningful sell-off in response to news about the spread of the Omicron variant of COVID-19. Once it became apparent that the symptoms were relatively mild compared to previous variants, worries about renewed lockdowns eased and stocks resumed the rally that has been in place since the lows of March 2020. Notably, the gains occurred even as the U.S. Federal Reserve and other world central banks moved to taper their quantitative easing policies and indicated that interest-rate hikes were likely to occur in 2022. The developed markets outperformed the emerging markets in December, continuing a key trend that has been in place for most of 2021, while the value style finished ahead of growth. European stocks led the global markets higher for the month and outperformed both the United States and Canada.

In this environment, Shariah Global REITs rallied and managed to outperform global equity markets. Regionally, the strongest Shariah REIT markets were the U.S., Australia, and Mexico while Hong Kong and Singapore posted positive returns but lagged the overall Shariah REIT universe. The best performing sub-sectors were Industrial, Residential and Specialized REITs such as Tower REITs while office, Healthcare and Diversified REITs underperformed.

Market outlook

The Shariah global REIT sector had a very strong 2021 as the sector's performance outpaced the broader global equity markets. As we enter 2022, we believe the sector remains an attractive asset class in the current market environment. While the Omicron variant has caused renewed volatility and concern that a sustained economic recovery may be derailed, we are optimistic given the early indications of the lower severity of this variant. With increasing vaccination rates, including the authorization of booster shots and progress on therapeutics, we believe that significant restrictions are less likely or will be short in duration if implemented which should allow the economic recovery to persist. We have seen evidence over the past year of pent-up demand that has begun in those regions where restrictions have been reduced or lifted and ultimately believe that will lead to stronger economic growth in 2022.

Despite this positive view, we consistently monitor potential risks across Shariah global REITs, including geopolitical risks that could weigh on global markets. Select sub-sectors and regions within Shariah global REITs may continue to see some earnings pressure as a result of the COVID-19 virus, and we have positioned the Fund accordingly. We believe near-term pressure on real estate fundamentals will ease over time as the global economy recovers, especially in the Office, Retail and Residential sub-sectors. From a regional perspective, we favour the U.S., Singapore, Australia, and Hong Kong owing to a combination of attractive valuations and distribution yields. Within these countries, and from a global perspective, we see investment opportunities within Industrial, Retail, Healthcare, and technology-related REITs. We have minimised our exposure to the Japanese and the U.K. REIT markets based on their relative distribution yields and valuations.

During 2021, there was a resurgence of dividend growth within the sector as some REITs reduced or maintained their dividends in 2020. We expect further improvement regarding dividend growth as the economy recovers in 2022. In addition, REIT valuations trade near or below their respective net asset values which may lead to an increase in merger-and-acquisition (M&A) activity. We have seen a pick-up in M&A which we believe is driven by an improved economic outlook, relatively low interest rate environment and by the significant amount of institutional capital that is designated to real estate investments.

Overall, we believe the long-term outlook for Shariah global REITs remains positive given the trajectory of the recovery and relatively low interest rate environment. Distribution yields within the sector remain attractive compared to other yield-oriented investments and the spread between the yields of REITs and fixed income securities is well above historical averages. We also continue to find attractive opportunities within the REIT market that trade at significant discounts to what we view as their intrinsic net asset values.

Fund review and strategy

Our long-term outlook for the Shariah Global Real Estate sector remains positive. Global REITs have remained resilient and are attractive in the current interest rate environment given the sector's favorable distribution yields and steady cash flow. Given the outlook for the economic recovery to push forward in 2022, we believe dividend and earnings growth will continue to trend positively. While the COVID virus has been problematic given the varying degree of cases around the world and the emergence of new variants, the overall progress of an economic recovery remains intact. We remain optimistic on the continuation of vaccine penetration and the recent approvals of booster shots to curtail the spread of the virus. We have seen evidence of pent-up demand that has begun in those regions where restrictions have been reduced or lifted and ultimately believe that it will lead to stronger economic growth in 2022.

The investment case for Shariah Global REITs remains positive given the trajectory of the economic recovery. Distribution yields within the sector also remain attractive compared to other yield-oriented investments. We continue to find attractive opportunities within the market that trade at significant discounts to their net asset values and believe current share prices and yields are attractive.

In December, the Fund posted positive returns but underperformed the benchmark. From a regional perspective, the fund benefitted from an underweight within the U.K. as well as the small REIT markets like Taiwan, Thailand, and Saudi Arabia. Stock selection within Mexico, specifically within the industrial sub-sector, contributed positively to performance. The Fund also benefitted from security selection within the Office and Industrial sub-sectors as well as an overweight in Tower REITs. These positives were offset by an overweight in Hong Kong and Singapore as well as negative security selection within the U.S. driven by an underweight in the Self-Storage sub-sector. Our overweight in the Retail and Health Care sub-sectors also detracted from performance as the rise in cases from the "Omicron" variant weighed on those sub-sectors.
