MARKET REVIEW OF TARGET FUND

In December, the CSI 300 Index rose by 0.66% while the CSI Small Cap 500 Index rose by 0.36% in CNY terms. In JPY terms, the CSI 300 Index rose by 2.04%, and the CSI Small Cap 500 Index rose by 1.74%.

In December, stock market had a volatile month and performance diverged among stock indices. The Shanghai Composite Index rose 2.13% while the CSI 300 Index rose 2.24%, and the ChiNext Index declined 5%. In general, large-cap stocks performed better than small-cap stocks. In terms of sector performance, media, social services, building materials, and public utilities returned more than 5%, while non-ferrous metals, power equipment, automobiles and other industries were the laggards. Industries that attracted thematic investment and benefitted from stable economic growth did better. On the other hand, sectors that performed strongly in 2021 suffered the most decline, especially stocks related to new energy. As investors take profit and rebalance their positions at year end, volatility has increased in the market.

STRATEGY IMPLEMENTED OF TARGET FUND

Since the beginning of 2021, technological innovation, anti-monopoly policies and the epidemic have had negative impacts on the earnings for some industries and companies. However, the direction of policy adjustments is conducive for long-term sustainable economic development. Therefore, although performance of companies was affected in the near term with significant valuation adjustment, we see a turning point for high-quality companies that are well-aligned with government's long-term policy direction and will increase allocation to these companies.

On the other hand, although market unanimously recognized that emerging growth stocks have considerable room for long-term growth, due to the upbeat near-term market sentiment, there is risk of excessive market expectations, periodic oversupply and overvaluation. As such, we will reduce our holding of some companies with ordinary long-term profit model and switch to higher quality companies with better earnings model. We prefer high-quality companies that have suffered from upstream expansion and supply shortage this year and will continue to look for new innovative investment opportunities.

OUTLOOK AND STRATEGY OF TARGET FUND

We remain optimistic about the fundamentals and prospects of 'A' shares.

After market adjustment in 2021, overall valuation is lower especially for value growth stocks with better long-term earnings model. On the other hand, valuation is on the high side for some emerging growth stocks.

Going forward, the fund will maintain a balanced portfolio with reasonable allocation to three main strategic directions. The three strategic directions are energy and information technology innovation, high-end manufacturing upgrades and consumption upgrades respectively. In addition, we will maintain a balanced allocation to value growth stocks and emerging growth stocks. In addition, starting from the fourth quarter, we will gradually reduce over-valued emerging growth stocks that have decreased growth expectations and increase holding of stocks with turning point in their fundamentals in 2022. Furthermore, we will reduce the market beta of the portfolio and increase stocks in sub-sectors to capture alpha.
