- 10. Operational Risk
- 11. Interest Rate Risk in the Banking Book

1. Introduction

Pursuant to Bank Negara Malaysia's ("BNM") Risk-Weighted Capital Adequacy Framework ("RWCAF"), banking institutions are to make available Pillar 3 disclosure for financial reporting beginning 1 January 2010.

RWCAF is based around three Pillars:

- Pillar 1 requires banking institutions to define rules for the computation of minimum capital requirement for credit risk, market risk and operational risk.
- Pillar 2 requires banking institutions to implement an Internal Capital Adequacy Assessment Process ("ICAAP") for other risks not covered by Pillar 1.
- Pillar 3 requires expanded disclosures to allow market participants to understand the risk profiles of the bank.

The Bank adopts The Standardised Approach ("SA") in computing the capital requirements for credit risk and market risk and adopts The Basic Indicator Approach ("BIA") for operational risk of the Pillar 1 under BNM's RWCAF.

Under SA, standard risk weights are used to assess the capital requirements for exposures in credit risk and market risk. The capital requirement for operational risk under BIA is computed based on average of a fixed percentage of positive annual income over the previous 3 years (equivalent to 12 quarters).

The Pillar 3 disclosure will be published in the Bank's website, www.boc.cn/malaysia.

2. Scope of Application

Bank of China (Malaysia) Berhad ("Bank") is a limited liability company, incorporated and domiciled in Malaysia. The holding company of the Bank is Bank of China Limited, whereas the ultimate holding company is Central Huijin Investment Ltd. (owned by Ministry of Finance, PRC), both incorporated in China. The principal activities of the Bank are commercial banking and related financial services. The Bank does not offer Islamic financial services nor involved in Islamic banking operations.

The Bank has a wholly owned subsidiary company which engaged in non-financial activities and the investment in subsidiary has been deducted from regulatory capital. As the subsidiary company's assets size is not significant in relation to the Bank's assets, there is no separate group consolidation for capital adequacy for regulatory capital reporting. For the purposes of this report, the disclosures presented within will be representative of the Bank entity disclosures only.

The disclosures have been reviewed by internal auditors and certified by Bank of China (Malaysia) Berhad's Chief Executive Officer.

3 Capital

3.1 Capital Management

The Bank's capital management is guided by the Bank's Capital Management Policy which sets out the minimum policies and procedures that the Bank needs to put in place and apply within its capital management programme, and the minimum criteria it should use to ensure that the Bank has adequate capital and effective plans to prudently manage the Bank's capital requirement to support the development of business, to meet regulatory capital requirements at all times and to maintain good risk rating. Capital Contingency Plan has been put in place where actions to be taken have been specified to address the capital adequacy issue in case the capital ratio falls below warning trigger ratio and Internal Capital Target ratio.

The objective of the Bank's capital management is to ensure that the Bank maintains sufficient capital at an appropriate level, meeting the requirement of all applicable regulatory standards and guidelines, risk compensation in line within the Bank's risk appetite, business development and return on capital is sufficient to satisfy the expectations of shareholders. In addition, through effective allocation of capital, and capital investment instruments, the Bank strives to continuously enhance its financial effectives, improve capital value, and ultimately maximize shareholders' value while controlling risk.

The Board of Director (BOD) shall assume the primary responsibility in ensuring capital is adequate to cover material risks inherent in the Bank by meeting all relevant regulatory standards and guidelines. Internal capital trigger point and minimum capital level is set for Total Capital ratio.

The Bank's capital management framework mainly focuses on capital planning, capital contingent plan and capital funding management. Annual business targets, Risk Appetite Statement and three-year projected business plans with financial projections and capital requirements are approved by the BOD yearly.

Capital adequacy and regulatory capital are closely monitored by Management, employing techniques based on the guidelines of Basel II for supervisory purposes. The information is reported to Management on a monthly basis and to the Board via the interim financial statement on a quarterly basis.

3.2 Capital Adequacy Ratio

With effect from 1 January 2013, the total capital and capital adequacy ratios of the Bank is computed in accordance with Bank Negara Malaysia's Capital Adequacy Framework (Capital Components and Basel II - Risk-weighted Assets) dated 28 November 2012. The Bank has adopted the Standardised Approach for Credit Risk and Market Risk, and Basic Indicator Approach for Operational Risk. In line with the transitional arrangements under Bank Negara Malaysia's Capital Adequacy Framework (Capital Components), the minimum capital adequacy requirement for common equity Tier I capital ratio (CET 1) and Tier 1 capital ratio are 4.5% and 6.0% respectively for year 2015. The minimum regulatory capital adequacy requirement remain at 8.0% (2014 - 8.0%) for total capital ratio.

Total CET 1 and Total capital ratio are as follows:

	Dec 2015	Dec 2014^
	RM'000	RM'000
Before/After deducting proposed dividends		
CET 1 capital ratio	21.310%	21.517%
Tier 1 capital ratio	21.310%	21.517%
Total capital ratio	22.354%	22.043%

Notes:-

[^] The adjustment made post Dec 2014 resulting in total credit risk RWA slightly increased by RM12.1 million. The impact on the bank's capital position is insignificant with CET 1 Capital Ratio & Tier 1 Capital Ratio and Total Capital Ratio slightly reduced from 21.570% to 21.517% and from 22.097% to 22.043% respectively.

The breakdown of risk-weighted assets ("RWA") by exposures in each major risk category are as follow:

31 Dec 2015 Exposure class	Gross exposure RM'000	Net exposure RM'000	Risk- Weighted <u>assets</u> RM'000	Capital requirements RM'000

					=======================================

^{*} Multilateral Development Banks ("MDBs")

[^] The adjustment made post Dec 2014. Credit Risk RWA increase from RM4.65b to RM4.67b due to some reclassified previously from "Banks, development financial institutions & MDBs" to "Corporate" exposure class. The increase of credit risk RWA of RM12.1m is insignificant impact on the bank capital position.

3.3 Capital Structure

The Bank's regulatory capital is divided into CET 1 and Tier 2 capital.

CET 1 capital consists of share capital, capital reserves, reserves created by appropriations of retained earnings and retained earnings. Tier 2 capital consists of general allowances, revaluation reserves and others.

Goodwill, investment in subsidiaries, investments in entities engaged in banking and financial services which are not consolidated in the financial statement, investment properties and investments in commercial corporations are deducted from core and Tier 2 capital to arrive at the regulatory capital.

Components of CET 1 and Tier 2 capital:

	Dec 2015	Dec 2014
	RM'000	RM'000
CET 1 capital		
Paid-up ordinary share capital	760,518	760,518
Retained profits	163,473	134,518
Other reserves	223,231	171,605
Regulatory reserves	22,671	
	1,169,893	1,066,641
Less: Regulatory adjustments applied in the calculation of CET 1 capital		
-Deferred tax assets	(2,783)	(3,627)
-Regulatory reserve attributable to loans and advances	(22,671)	(3,021)
Total CET 1 comital	1 144 420	1 062 014
Total CET 1 capital	1,144,439	1,063,014
Total Tier 1 capital	1,144,439	1,063,014
Tier-2 capital		
Collective impairment allowance	34,407	26,962
Regulatory reserves	22,671	-
Less: Investment in subsidiary	(1,000)	(1,000)
Total tier-2 capital	56,078	25,962
Total capital base	1,200,517	1,088,976
<u>Capital ratios</u>		
CET 1 capital ratio	21.310%	21.517%
Tier 1 capital ratio	21.310%	21.517%
Total capital ratio	22.354%	22.043%

4. Risk Management

4.1 Risk Management Framework

Risk Governance

The risk governance of the Group and the Bank are as follows:

Establish Risk Appetite, risk Tolerance	Board of Directors ("BOD")
and Policy & Framework	Board Risk Committee ("BRC")
Ensure Implementation of Risk Policy	Risk Management and Internal Control
and Compliance with The Risk	Committee ("RMICC")
Tolerance and Others	Senior Management
	Risk Management Department ("RMD")
	Internal Audit Department
Implement and Comply with Risk	All the Departments and Branches
Policy and Monitoring of Risk	
Tolerance	

The BOD is ultimately responsible for the oversight and management of risks of the Group and the Bank.

RMICC assists the BRC and BOD in risk management oversight, responsible for assessing the development of risk policies, reviewing risk policies and exposure, aligning risk management with business strategies and planning, ensuring that infrastructure, resources and systems are put in place for effective risk management activities.

The Internal Audit Department is responsible in providing an independent review on Risk Management Framework and to assess the soundness and adequacy of internal controls of the Bank.

The independent Risk Management Department provides crucial support to the RMICC and BRC for implementing the risk policies and overseeing the compliance. They are also responsible for the identification, measurement, monitoring and reporting of risk.

The Business Units are the first line of defense against risk that responsible for identifying, mitigating and managing risk within their line of business to ensure the day-to-day business activities are carried out within the established risk policies, tolerance and procedures.

Risk Management Approach

Pillar 2 requires the banking institutions to assess their internal capital requirements in relation to their risk profile of their business through the Internal Capital Adequacy Assessment Process ("ICAAP") beyond the capital requirements for credit, operational and market risks under Pillar 1 in a more forward-looking approach.

The Bank's ICAAP is guided by the ICAAP Policy detailing the responsibilities, approaches, methodologies for identifying and measuring risks, stress testing, reporting and review process, capital planning including a 3 year-plans, independent review, and etc. The Bank has undertaken a self-assessment to evaluate the existing capital and risk

management practices against the expectations set forth by BNM, as well as actions to close the gaps.

The internal adequacy assessment is stressed-tested based on specific stress scenarios, mainly using quantitative analysis, covering main risks across the business lines and taking full consideration to the impact of macroeconomics changes to assess the impact on Bank's capital adequacy. The stress test results will be submitted semi-annually to BNM.

The Bank has identified the key risks and put in place measurements and control to mitigate those risks; and throughout the Bank's risk assessment process, stress testing and scenario testing are employed to ensure that the capital is adequate to cover the risk which are not fully captured under Pillar 1, such as liquidity risk, interest rate risk in banking book and concentration risks. Such information allows senior management to identify adverse trend, take preventive and corrective measures and formulate business strategies.

5 Credit Risk

Credit risk is the risk of financial loss that results from borrowers or counterparty failing to meet their obligations. Credit risk arises primarily from lending activities and represents the major risk of the Bank.

The Bank structures the levels of credit risk it undertakes by placing limits on the amount of risk acceptable in relation to one borrower, or group of borrowers and industry segments. Such risks are monitored on a regular basis and are subject to annual or more frequent review. Limits on the single customer, by group of customers, by industry sectors and other procedures set by the relevant authorities and holding company were adopted by the Bank for monitoring of the credit risks.

Monitor and Mitigation of Material Risks

- Prudent customer selection is achieved in collaboration with our business line counterparts who stand as a first line of defense. It is noticeable that the Bank has adequate management of its credit risk by increasing its portfolio more in better risk rating category and most loans are rated "B" or better. Any exceptions are adequately mitigated through credit risk mitigants such as collaterals or guarantees;
- The Bank applies the 3-in-One concept of approval process where credit exposures are independently assessed by Credit Approval Department and deliberated by the Credit Evaluation Panel ("CEP"), and then only submitted to the CEO for final decision. Experienced and competent key personnel are appointed to the CEP to assist the CEO in assessing the credit application and major credit decisions, to provide recommendation to the CEO for final decision. The CEO has the discretion to reject or modify terms and conditions of the loans passed by CEP. The Board Risk Committee or the Board of Director has the veto power to reject credit or modify the

terms and conditions which have been approved by the delegated approving authorities.

• The Bank continued to analyze its credit exposure portfolio and report to Management on a monthly basis through RMICC and to the Board Risk Committee and Board of Directors on a quarterly basis.

5.1 Past Due and Impaired Loan

The loans/financing of the Bank is considered past due when the repayment amount due and unsettled on the due date. A loan is considered to be past due when the counterparty has failed to make a principal or interest payment when contractually due. Past due does not necessarily mean that a loan is impaired. Individual loan of more than 90 days past due is classified as impaired and any other events occurred as per the policies.

The classification of impaired loans/financing and provision of the Bank for loans/financing impairment is consistent with the standard under Malaysian Financial Reporting Standards ("MFRS") 139 —Financial Instruments Recognition and Measurement issued by Malaysian Accounting Standards Board ("MASB") and guidelines by BNM on "Classification and Impairment Provisions for Loans/Financing".

The loans/financing ("loan(s)") of the Bank are classified as impaired when they meet the following criteria:

- i. where the principal or interest or both of the loan is past due for more than 90 days or 3 months. In the case of revolving facilities, (e.g. overdraft facilities), the facility shall be classified as impaired where the outstanding amount has remained in excess of the approved limit for a period of more than 90 days or 3 months; or
- ii. where the amount is past due or the outstanding amount has been in excess of the approved limit for 90 days or 3 months or less, the loan exhibits objective evidence of weaknesses that would render the account as impaired; or
- iii. Where repayments are scheduled on intervals of 3 months or longer, the loan/financing is classified as impaired as soon as a default occurs, unless it does not exhibit any objective evidence of weaknesses that would render the account as impaired.
- iv. when the loan is classified as rescheduled and restructured (with increase of credit risk) in CCRIS.

For impaired loans, the Bank shall conduct individual impairment assessment and to set aside the individual impairment provisions if the estimated recoverable amount (present value of estimated future cash flows discounted at original effective interest rate) is lower than the net book value of the loan.

For all non-impaired loans and individually assessed impaired loans but there is no impairment provision exists, the loans are grouped according to their credit risk characteristics for the purpose of calculating an estimated collective loss. The Bank have applied the Collective Impairment Provision in line with the Standard under MFRS139 and has been independently verified by external auditor.

As beginning of the financial year Allowance made during the financial year Exchange Rate Differences	26,962 5,925 1,520	25,066 1,156 740
At the end of the financial year	34,407	26,962

6. Credit Rating

The Bank credit rating on gross loans and advances are identified based on the following internal credit grading system-

- "AAA –A" refers to customers have a good credit status, low probability of default within the next year, strong repayment capability and limited credit risks.
- "BBB B" refers to customers have a good credit status, relatively low probability of default within the next year, guaranteed repayment capability and uncertainties in their risk.
- "CCC C" refers to customers have a poor credit status, high probability of defaults within the next year, poor operating condition and financial status and significant credit risks.
- "D" refers to customers have defaulted by the time of rating. Customers that have defaulted are directly rated D.

Under the standardized comprehensive approach, the bank make use of credit rating assigned by External Credit Assessment Institutions ("ECAIs") that are recognized by BNM in its calculation of credit risk weighted assets for capital adequacy purposes.

Disclosures on Rated Exposures according to Ratings by ECAIs.

Note: Definition of Default

Default is recognized in any of the following circumstances:

- The customers' credit assets at the Bank are classified as doubtful or loss by the time of rating.
- The customers' credit principal at the Bank is overdue for over 90 days (inclusive) by the time of rating.
- The customers' interest at the Bank is overdue for over 90 days (inclusive) by the time of rating.

7. Credit Risk Mitigation

The Bank is granting the credit facilities based on the credit standing of the customer, source of repayment, debt servicing ability and collateral(s)/ guarantees/ etc as the credit risk mitigant(s) (CRM). The credit facilities may be granted unsecured premised on the merit of the customer's standing.

The main types of collateral obtained by the Bank to mitigate credit risk are as follows:

No	Types of Collaterals
1	Fixed Deposits, Cash Margin
2	Residential Property
3	Non-Residential Property (e.g. shop, factory, warehouse, land, complex,
	etc.)
4	Quoted Shares

The Bank also accepts guarantees from individuals, corporate and institutional customers to mitigate credit risk subject to internal guidelines on eligibility.

Valuation report of the property by the panel valuer is required by the Bank to ensure the value is fair unless is exempted by the Bank. Generally, the value of the property charged is updated during the periodic credit review to reflect the current market value.

For the computation of capital adequacy requirements for collateralized transactions, the Bank has since in August 2013 applied **comprehensive approach**, which allows greater offset of CRMI against exposures, by effectively reducing the exposure amount by the value ascribed to the collateral. This is guided by the minimum conditions for the eligible collaterals set out in the "Risk-Weighted Capital Adequacy Framework (Basel II – Risk-Weighted Assets Computation) issued by BNM.

Total	4,137,054	1,119,998	685,015

Counterparty Credit Risk (CRR)

The CRR arising from the inter-bank transactions, is managed via the establishment of the counterparty limits for each counterparty and is monitored on a daily basis.

9. Market Risk

Market risk is the risk of losses in on- and off-balance sheet positions arising from movements in market prices.

The Bank's Risk Management and Internal Control Committee (RMICC) is responsible for the oversight of market risk management of the Bank and execute Board Risk Committee (BRC) and Board's mandate on market risk management strategies, risk appetite and tolerance level. The Bank has established the Guideline on Market Risk Management to govern BOCM's market risk governance structure, risk identification, measurement, monitoring and reporting processes. BOCM's market risk is managed by

the Risk Management Department (RMD) on daily basis. RMD reports to RMICC on monthly basis on BOCM's market risk exposures and its compliance to the limits approved. RMD currently measures and monitors its FX Net Open Position (FX NOP), Value-at-Risk (VaR), and stop loss limits on daily basis.

For capital requirement, the Bank has adopted the Standardised Approach. The current market risk capital charge arises from the Bank's exposures in the foreign exchange risk from the FX spot, swap and forward transactions.

for Market Risk		

10. Operational Risk

Operational risk can be defined as the risk of monetary loss resulting from inadequate or failed internal processes, people, and system or from external events. RMICC of the Bank is responsible for the development of a control framework, the promotion of a strong risk management culture in the Bank, and the monitoring and administration of operational risk. The computation of Operational Risk is in line with BNM's guidelines and formula under the Basic Indicator Approach ("BIA").

The Bank continue to strengthen the overall coordinating of its internal control and operational risk efforts, enhanced the foundation, optimised the measures, and upgraded technological support. The operational efficiency and results of the three internal control defence lines were thus continuously enhanced.

Branches, business departments and staff at various levels of the Bank are the first line of defence, responsible for internal control when promoting business development. The Risk Management Department (RMD), together with the management team, is the second line of defence. RMD is responsible for the overall planning for planning of policies, examining, monitoring and assessing the performance of the first line of defence. The Internal Audit Department is the third line of defence. The department mainly focused on business lines auditing and carried out inspections of systematic and material risks at all levels if business units and branches.

Some of the key management and control techniques include segregation of duties, clear delegation of authority, sound project management and disaster recovery plan. Our internal audit function independently appraises the adequacy and effectiveness of the internal control environment and reports results independently to the Audit Committee of the Bank

Risk awareness is a key component for identifying, assessing, monitoring and mitigating operational risks. The Bank is encouraging an "operational risk awareness culture" among all the staffs. Through the regular workshops, most of the departments have created the operational risk management environment in which not only the risk coordinators, but also the head of department and other employees are actively involved.

11. Interest Rate Risk in the Banking Book

By using the repricing gap method, an increase or decrease by 100 basis point, the impact in earnings and economic value as stated below:

As at 31 December 2015:

Curranav	Earnings	Economic Value
Currency	In Thousands	In Thousands
All Currencies (in MYR)	+/- 23,549	+/- 17,792
USD	+/- 6,632	+/- 11,951
CNY/CNH	+/- 348	+/- 310

As at 31 December 2014:

Curronav	Earnings	Economic Value
Currency	In Thousands	In Thousands
All Currencies (in MYR)	+/- 16,812	+/- 8,646
USD	+/- 540	+/- 2,182
CNY/CNH	+/- 12,700	+/- 7,627
